Status: CERTIFIED

CERTIFICATION SUMMARY

This certification confirms that "APEX-OmniHub Orchestrator API (staging)" has been validated in a controlled sandbox environment using the Armageddon Test Suite. Results reflect the tested build and configuration at the time of run.

RUN + ATTESTATION

Algorithm: ed25519
Key ID: 37557e9ef2e85246
Valid Until: 2026-10-20
Run ID: eb989339-e991-4e6d-b271-459401a035e2
Timestamp: 2026-07-22T16:31:33.61+00:00
Mode: LIVE_FIRE
Chaos Seed: 3444721184

VERIFICATION NOTES

- ▶ This report can be verified offline using the provided verifier.
- ▶ Attestation is tamper-evident and cryptographically bound.
- ▶ Results reflect the tested build/configuration at time of run.
- ▶ Certification does not imply real-world breach prevention.

CATHEDRAL ARCHITECTURE DURABILITY LOG

Client-Side Compute

All heavy computation executes within isolated client sandboxes. The host never receives raw inputs or intermediate state.

Zero-Egress Streaming

Inputs and outputs stream directly inside the sandbox perimeter. No data egress; no persistence; no external surface area.

20,000 Concurrent Stress Battery

Designed for extreme concurrency. Sustains 20,000 parallel adversarial sessions while maintaining isolation, determinism, and stability.

LEGAL DISCLAIMER

Armageddon is designed for controlled sandbox testing and does not guarantee breach prevention. Certification reflects results of the tested build/configuration at time of run.
